

## Method 2: Biodiversity

We used the website Encore Biodiversity to evaluate each sector from our portfolio according to five criterias.

Sector	Solid waste	Soil pollutants	Water pollutants	GHG emissions	Ecosystem use
Financials	3	3	3	4	3
Information Technology	4	3	4	4	3
Real Estate	4	3	3	4	5
Industrials	4	5	4	4	5
Consumer staple (bien de conso cyclique)	4	4	4	4	5
Telecommunication Services	3	2	4	3	4

Impact score:

1: Very Low

2: Low

3: Medium

4: High

5: Very High

We can see on this analysis that our sectors are not the best in terms of solid waste, soil pollutants, water pollutants, GHG emissions and Ecosystem use. All these factors are taken into account to calculate the biodiversity impact. To conclude we can say that the two methods are contradictory because our sectors are not well rated but according to environmental score they are classified as companies with a negligible impact on the environment
